Nilfisk / Advance SC500

Record observations for service. This sheet does not diagnose or authorize repairs.

Use only information already available from a safely stopped machine. Do not run a faulty machine to complete this sheet. Follow the matched manual and workplace shutdown procedure; do not open protected parts, bypass interlocks or test live circuits.

1 Identify the machine and document

Full model / product or order number

Date / reporter (keep private)

Serial / asset reference (share privately)

Power / deck / panel / fitted options

Manual number / revision / region / page

2 Capture the existing symptom

Full product number; battery option; alarm text; pickup, solution flow or streaking; which function changed.

Exact message / code / indicator / beep pattern

What happened, when it began, and which functions still worked

Visible pattern / operating context / recent changes

3 Separate observations from a suspected cause

What was actually observed (include what is unknown)

Any earlier action, who performed it, and the result (or write None)

4 Prepare the handoff

Question for qualified service / source correction needed

Scope reminder: The cited cover lists 9087352020 and 9087353020. Application to US lithium-ion SKU 56394690 is unconfirmed. Regional manual 9099974000 is a separate document and is not the source of this alarm table.

Document references: 9099980000, 11/14 (1), printed p. 26; PDF p. 28; Same manual, printed pp. 4-5; PDF pp. 6-7.
